

Case Study - Bernard Matthews

1st May 2015

Mainlight installed replacement lighting in the 2 Cold Storage facilities at the Bernard Matthews operation in Norfolk.

The UK's largest turkey supplier processes over seven million birds annually and operates large cold storage facilities at temperatures as low as -26 degrees.

The project focused on improving light quality and reducing operating costs in line with the business' CO2 reduction programme.

Mainlight were selected to install the lighting scheme, and handled all aspects of this chilly and complex cabling and lighting installation to replace the 250W SON lighting with the TLC1100 product from Trumeter. Disruption to production operations was avoided completely and Mainlight responded fast and capably to deal with the technical aspects of the installation.

The TLC1100 low-profile design, robust construction, integrated driver and -40C operating specification made it the perfect product selection for Bernard Matthews. The addition of sensors completed the energy saving package that will save £511,000 over the 10 year warrantied operating life, with a payback of less than 14 months.
