

MAINLIGHT LAUNCH NEW WEBSITE

30th June 2015

Mainlight today announced the launch of a new and improved website www.mainlight.co.uk

The website showcases the full range of lighting and electrical services that the company provides, and has been designed to be easy to use for new and existing clients to quickly navigate to the services they require.

The screenshot shows the Mainlight website homepage. At the top, there is a navigation bar with links for Home, About us, Our Services, News, and Contact us. The main heading is "Experts In Lighting And Electrical Services". Below this, there is a list of services: Energy Efficient Lighting, Lighting Maintenance, External Lighting, Emergency Lighting, Electrical Installation & Maintenance, Electrical Testing, Portable Appliance Testing, Fire Alarm Systems, and Thermal Imaging. There is also a section for Customer Testimonials, featuring quotes from Mizkan Europe and UPM Shotton Paper. At the bottom, there is a section for Accreditations, including ISO 9001, ISO 14001, and other certifications. The footer contains the Mainlight logo, contact information, and social media links.

On the website are testimonials from satisfied clients along with case studies of successful installations and innovative maintenance programs that have reduced client's costs and improved their electrical and lighting operations.

Added on every page also is a link to the trutrak customer portal – an innovative cloud based data management system that allows Mainlight's clients real time access to all their certification and test report data, including updates, photos and other information on remedial work and installation progress.

Mainlight General Manager Pete Walsh commented "The new website is an excellent window into the full range of electrical and lighting services that Mainlight can provide, and we hope that both our existing and new clients will benefit from the professional layout and wealth of information and support that the new website provides."
